POISON OAK

MT. TAMALPAIS SCAVENGER HUNT

1. Identify poison oak. How many leaves does it have? What color is it? (Do not touch it!)
2. Touch something growing on a tree. Is it soft, brittle, or squishy? Is it moss, lichen, fungus?
3. Plants require pollinators to help them reproduce. Find a pollinator (an insect?). What is it and what kind of plant is it pollinating?
4. Draw/describe something you find that depends on something else.
5. Even though our lakes are human-made they are home to a lot of native species. Do you see anything in/around the lake? What is it?
6. MMWD works hard to protect Mt. Tamalpais's natural resources. Name something from the area that cannot be replaced once it is used up.
7. Invasive plants are often non-native (not from Marin) and take over a habitat. Find an invasive. What is it? How is it affecting the habitat? Draw it below.
